## **DETAILED ACTION**

### ***Response to Amendment***

1. This is in response to an amendment/response filed on August 14<sup>th</sup>, 2009.
2. Claims 1 and 3-10, 12, and 13 have been amended.
3. Claim 11 has been cancelled.
4. No claims have been added.
5. Claims 1, 3-10, 12, and 13 are currently pending, and now allowed.

### ***Drawings***

6. Replacement sheets for the drawings were received on August 14<sup>th</sup>, 2009. These drawings are acceptable.

### ***Reasons for Allowance***

7. The following is an examiner's statement of reasons for allowance:

For independent claim 1, the prior art fails to show alone or in combination a method operable in a local device for determining clock skew in a packet-based session between the local device and a remote device with a non-deterministic packet delay wherein the method comprises receiving a sequence of control packets, comparing a first real-time stamp and a first remote media card clock time-stamp, transmitting a sequence of control packets from the local device, and comparing a third real-time stamp and a first local media clock time-stamp.

Art Unit: 2416

The prior art of Falco et al. (U.S. Patent 6,687,752) discloses a method and system for determining a clock skew between a local device and a remote device. However, Falco et al. fails to specifically disclose comparing a first real-time stamp and a first remote media card clock time-stamp from a first received control packet with a second real-time stamp and a second remote media card clock time-stamp from a second received control packet, respectively, to determine from said two received control packets, a first relative rate of a remote media card clock to the remote real time system clock. Falco et al. further fails to specifically disclose comparing a third real-time stamp and a first local media card clock time-stamp from a first transmitted control packet with a fourth real-time stamp and a second local media card clock time-stamp from a second transmitted control packet, respectively, to determine from said two transmitted control packets, a second relative rate of a local media card clock to the local real-time system clock.

For at least the reasons provided above, independent claim 1 is allowable over the prior art. Dependent claims 3-10, 12, and 13 are allowable because they depend on the allowed claims.
